Second

Department of Somefield, Institution of Someplace, City, Country. E-mail: email@address.com.

ABSTRACT: This template provides you with an example of the layout and style, which we wish you to adopt during the preparation of your paper. Please, make an abstract as short as possible (5 to 8 lines). Authors of papers to proceedings have to type these in a form suitable for direct photographic reproduction by the publisher. In order to ensure uniform style throughout the volume, all the papers have to be prepared strictly according to the instructions set below. The authors are recommended to prepare a paper with 6 to 10 pages (never exceed 10 pages in length). The manuscript should follow the instructions described below.

The manuscripts and the completed copyright transfer form should be submitted as an electronic file through the conference website **www.igs5.or.kr** until the 31st of December, 2012.

Keywords: *Maximum 5-6 keywords should be shown, e.g. numerical analysis, bored tunnelling, safety, settlement, pile foundation, measurement. Type a comma after each keyword. Do not use a full stop or comma after the last keyword*

1. INTRODUCTION

This template provides you with an example of the layout and style, which we wish you to adopt during the preparation of your paper. Please follow the instructions carefully. The text should be printed in double column layout. Only the title and the abstract should run over both columns. Below you will find the required sizes of margins and columns as well as the required typefaces.

2. GENERAL INSTRUCTIONS

2.1 Format

The Paper should be prepared according to the instructions provided in this section. Use the formatting of this template and do not change it.

2.1.1 Headings

All the 1 headings should be in **bold style**. The section headings should be in capital letters, the subsections in upper and lower case. Do not underline. Section and subsection headings should be left justified. After section headings and subsection headings use 6 point or 0.5 line space.

Table 1. Editorial instructions

Item	Explanation
Paper size	Use A4 format (210 x 297 mm)
Length	Full papers should not exceed 10 pages
Margins	Leave 2 cm as margins on top, 1.5 cm as margins on bottom and on left and right side
Fonts	Use bold 18 point Times New Roman font for Title; 12 point Times New Roman font for Authors; 12 point Times New Roman font in 1.0 line spacing for text; 10 point Times New Roman for text in tables

2.1.2 Paragraphs

The first paragraph of each section needs no indentation. Paragraphs after the first paragraph of each section need an indentation at the first line as shown in this template. Leave no line space between the paragraphs. This rule is not applied for References list.

2.1.3 Tables

Tables should be presented as indicated in Table 1. Their layout should be consistent throughout. Horizontal lines should be placed above and below label headings, below subheadings and at the end of the table. Vertical lines should be

avoided. 10 point Times New Roman is used for text in tables. Table title should also be 10 point Times New Roman but in *Italic style*. The title is placed above on the left side of the table with a space of 0 point.

2.1.4 Figures

Figures and photographs must carry numbers in the text, e.g. Fig. 1, and captions. Captions should be complete enough to allow appreciation of the illustration without referring to the text. Lettering of the caption should be nearly as large as the typeface used for the text.

Large figures or tables which occupy two columns should be placed at top or bottom of the page. Keep figures as simple as possible. Avoid excessive notes. Photographs must have a resolution of at least 300 dpi.

Fig. 1. Insert figure caption here

2.1.5 Equations

Use the equation editor of the selected word processing program. Equations are not indented (Formula tag). Number equations consecutively and place the number with the tab key at the end of the line, between parentheses. Refer to equations by these numbers. See for example Eq. (1) below:

$$K_t = \left(1 - \frac{R^2 \tau}{c_a + v \tan \delta} \right)^4 k_1 \quad (1)$$

where, c_a = interface adhesion; δ = friction angle at interface; and k_1 = shear stiffness number.

For simple equations in the text always use super- and subscript (select Font in the Format menu). Do not use the equation editor between text on same line. The inline equations (equations within a sentence) in the text will automatically be converted to the AMS notation standard.

Equations should be confined to one column wherever possible, as in Eq. (2), and the equation array environment may be used to split equations into several lines, for example in Eq. (2), or to align several equations. Equation should be kept 12 point or 1.0 line space from above and underneath text lines.

$$U = D(\delta_1, \delta_2, \delta_3, \delta_4)R_{12}(a, \delta_5)R_{13}(b, \delta_6) \quad (2)$$

3. CONCLUSION

Commercialism

All commercialism must be avoided. This applies to all authors including those at universities, consultants, independent laboratories and manufacturers. Products should be defined by their properties. Product names can only be used once within the paper, and only where they are associated with the definition of the properties. Papers that do not conform will be returned to the author to be revised. Failure to conform to these rules in the final submission will result in rejection of the paper. Acknowledgement of sponsorship at the end of a paper is both appropriate and acceptable.

Clearances

The author(s) are responsible for obtaining written permission to profile the project or subject matter in their papers from any and all clients, owners or others who are/were contracted for the work. The Organization Committee assumes you have obtained the proper permission and requires the author(s) to sign a release form to this effect. This form will be sent to the authors with the comments on the first submittal and will be returned with the second submittal. The Organizing Committee assumes no liability for the author's(s') failure to gain proper permission.

Copyright material

If a figure, table or photograph has been published previously, it will be necessary for the author to obtain written approval from the original publisher for it to be reprinted in the Proceedings. The source of previously published material should be included in the caption for the table, figure or photograph. The material will be delivered to the Organizing Committee free of copyright charges.

ACKNOWLEDGMENTS

Even one late paper can uphold the production of the book and CD-Rom. Papers that arrive late are therefore likely to be excluded from publication. Finally, check the IGS-Incheon 2013 Website at **www.igs5.or.kr** for any updates and good luck on your papers.

REFERENCES

References should preferably be arranged in Authors surname alphabet order as example below. The first line of each reference has no indentation while the remaining lines have the same indentation as shown below. Leave no line space between the references.

- Hansbo, S. & Jendeby, L. (1998). "A follow-up of two different foundation principles", Proceeding 4th International Conference on Case Histories in Geotechnical Engineering, March, St. Louis, Missouri, pp. 259-264.
- Phung, D. Long (1993). "Footings with settlement-reducing piles in non-cohesive soil", Ph.D. Thesis, Chalmers University of Technology, Gothenburg, Sweden.

The manuscripts (Word and PDF formats) and the completed copyright transfer form should be submitted as an electronic file (single zip-file) through the conference website **www.igs5.or.kr** until the 31st of December, 2012. This zip-file should be named as follows: your abstract/paper ID number and after an underscore the family name of the corresponding author. For example: Abstract/Paper ID: **001** and corresponding author: **Shin** must be saved as **001_Shin.zip**
